By typing our names and student numbers in the above table, we certify that the work in the attached assignment was performed solely by those whose names and student IDs are included above.

In addition, we indicate that we are fully aware of the rules and consequences of plagiarism, as set forth by the Department of Computer Science and the University of British Columbia

Short Project Description

A. What is the domain of the application? Describe it.

The domain of this application will be the Marvel cinematic and elements of the comic universe. More specifically, it focuses on organizing information about superheroes and villains, the powers they possess, the organization they belong to, and the different universes in which they exist (such as Earth 616).

Additionally, it focuses on how different elements in the Marvel World interact with each other. We then show how these elements interact with each other and the relationships formed. For instance, we show how heroes are connected to their powers, and how they are affiliated with teams like the Avengers or organizations like S.H.I.E.L.D.

B. What aspects of the domain are modeled by the database?

The Database models key components of the Marvel World, focusing on the entities and relationships that would define how characters, powers, organizations, and universes interact.

It does not represent every element within the Marvel world; however, it focuses on the main structural elements, which are sufficient to describe and analyze several of the major arcs within the Marvel cinematic and comic universes.

The main entities modelled by our database include:

“Superhero”: This Entity Represents Individual characters and their general attributes. It also acts as an isA to “Avenger”.

“Power”: An entity that represents abilities, which could be shared across multiple characters.

“InfinityStone”: An entity that represents powerful cosmic artifacts that govern fundamental aspects of reality within the Marvel universes, making them central to many major arcs.

“Team”: An entity that represents organized groups of characters who work together toward a common goal, such as the Avengers or other superhero collectives.

“Universe”: An entity that represents distinct continuities or realities within the Marvel multiverse in which characters, events, and organizations exist.

“Movie”: An entity that shows which represent individual Marvel cinematic productions, and captures when and how characters, events, and artifacts appear within the MCU.

“Location”: An entity that represents significant places within the Marvel world, such as cities, planets, or specific sites where events and interactions take place.

“Villian”: An entity that represents antagonistic characters who oppose superheroes and play key roles in conflicts and major story arcs.

“Organizations”: An entity that represents companies or organizations that work together in the Marvel Universe. This can range from regular companies like “Stark industries” to organizations that hire avengers like “S.H.I.E.L.D”.

ER diagram has been added to the next page.

AI Use: None of the project was completed with the help of AI.
